Addon Installation

Please follow the below steps to complete the installation process of the Course Bundle Addon.

Course Bundle Addon

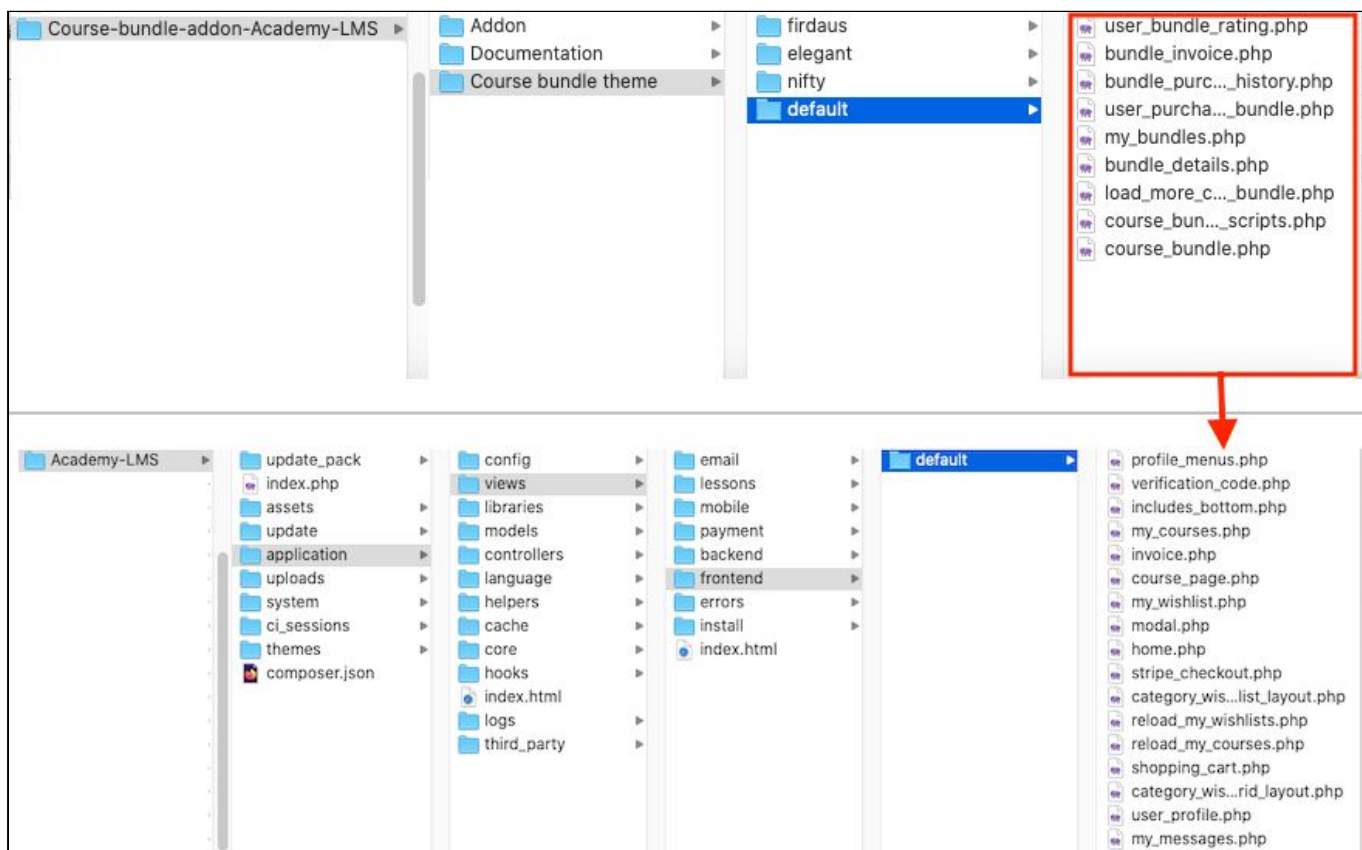

1. The installation of the Course Forum addon will require the latest version of Academy LMS. To check the version, please go to the **Settings** menu and click on the **About** option.

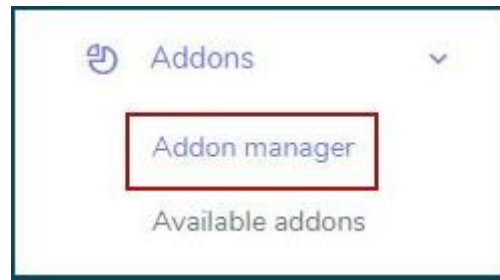

2. If you are running the latest version 4.3 or greater than 4.3 of Academy LMS, You are now ready to install the addon.
3. First download the add-on you want to install on your application from Codecanyon.
4. Now you need to unzip the downloaded file.
5. You will get two folders inside the downloaded file. One is for documentation and the other is for the addon file.
6. No need to change anything like renaming, removing, etc.

7. Before installing the Course Bundle addon, we will recommend you to move the view files first. This process is manual. View files for Course bundle addon have been placed separately inside the **Course-bundle-theme** folder. Here you will find all the view files we've used for all the different themes like **Default, Nifty, Elegant** etc. You will have to move the view files manually on your server. Just follow the steps below.

- Theme folder location: Root directory of your server > application > views > frontend > default > put the theme files of your bundle here.
- Please see the screenshots below to better understand the process.

8. Now get back to your application. You need to log in as an Admin. After logging in follow the next steps below.
9. From the left navigation menu, Go to Addon Manager from the Addon section.

10. You will find a list of addons you have so far.
11. Click on the “**Add New Addon**” button on the top. It would redirect to an upload addon view.
12. That view will contain a single field called “**Upload Addons File**”. You just need to upload the “**course_bundle.zip**” file.
13. After that hit the “**Install Addon**” button.
14. You will get a success message notification and you can also see the newly installed addon on the “**Installed Addon**” list there.
